**IN THE CLAIMS:**

13. (Currently Amended) A method of routing call requests, the method comprising: receiving at a wireless mobile communication device an identifier from a source over a first

wireless connection; determining whether the identifier comprises a recognized identifier based on a look up table containing alternate addresses, accessible to the wireless mobile communication device; and communicating to a wireless switch, when the identifier comprises a recognized identifier, a request to forward voice communications to the wireless mobile communications device to an alternate communication device.
